RAINSTOPPER® 2000W CLEAR

**DESCRIPTION**
RAINSTOPPER® 2000W Clear is a combination of a silicone emulsion with a reactive silane producing a penetrating concrete and masonry sealer and water repellent.

**FEATURES**
- A viscosity comparable to water
- One component ready to use.
- No catalyst required
- Reactive silane to chemically link to the substrate for permanent protection

**BENEFITS**
- VOC compliant
- Protects against moisture chemical and salts.
- Breathable, allows moisture vapor to pass thru from interior.

**APPLICATION**
**Application Equipment**: RAINSTOPPER® 2000W Clear may be roller or spray applied. A low pressure spray unit (20-25 pounds per square inch) or Hudson sprayer is recommended.

**Surface Preparation**: Before application, be sure the surface is clean and free of environmental dirt, efflorescence, form oils, curing compounds or any other foreign matter that can affect the penetration of RAINSTOPPER® 2000W Clear. Surface to be treated should be uniformly dry. Surface cleanliness can be tested by putting a drop of water on surface to be coated. If water is rapidly absorbed, substrate is ready for application. If water sits on surface, or looks like an oily spot, more cleaning is required.

**Application Rate**: Application rate will vary dependent upon porosity. For brick, masonry, stone, aggregate, and stucco, estimate 75 to 100 square feet per gallon of product for sealing applications. For precast concrete, architectural concrete, and synthetic stone, estimate 100 to 125 square feet per gallon of product. For priming, coverage per gallon of concentrate is approximately double sealing operations.

**RECOMMENDED OVER**
Brick, masonry, stone, aggregate, gravel, precast concrete, architectural concrete, stucco and synthetic stone.

**BEST PERFORMANCE**
- Masonry should be cured a minimum of 28 days before application.
- Rain or snow is not imminent.
- Surface should be free of foreign matter and not frozen.
- Keep containers sealed.
- RAINSTOPPER® 2000W Clear is for above grade only.
- Allow to cure under ideal conditions for a minimum of 72 hours if an oil based system is to be applied.
- Environmental temperatures should be between 45°F and 100°F (7.0—37.7°C).
- Do not store near excessive heat or flame.
- Not designed as water proof system to meet severe wind driven rain conditions.
- During application use splash goggles, rubber gloves, protective apron and vapor respirator.
- Storage: Up to six months in sealed containers stored at 45°F to 100°F.
- TCA does not promote or recommend coating the sealant joints, nor is the sealant compound an approved substrate.
- Do not store near excessive heat or flame.

ORDER INFORMATION

Packaging: Available in one (1) and five (5) gallon pails, and thirty (30) gallon drums. Application Rate: Application rate will vary depending upon porosity. For brick, masonry, stone, aggregate and stucco estimate 75-100 square feet per gallon. For sealing applications. For precast, concrete, architectural concrete and synthetic stone estimate 100 to 125 square feet per gallon. For Horizontal concrete decks estimate 100-150 square feet per gallon. For priming dilutions, coverage per gallon of concentrate is approximately double sealing operations. Check with architect or specifier for appropriate cover.

SAFETY

VOC COMPLIANCE

All TEX•COTE® products comply with federal and state Volatile Organic Compound (VOC) rules and regulations. Please contact your nearest TCA office for assistance on the local VOC regulations in the area of intended use.

WARRANTY

Upon completion of application of coating in accordance with the manufacturer’s recommendations, TexCoatings of America, Inc. will extend its limited commercial warranty for product replacement as a result of defect in the material. The manufacturer must be notified prior to the application of the coating and the installation. TexCoatings of America, Inc. shall have no obligation to contribute to or otherwise participate in labor or cost associated with effecting repairs. Specimen copy of material warranty available upon request.

SHELF LIFE

Twelve (12) month shelf life based on the following: containers sealed, upright and stored in a dry place. Maintain temperature at 45°F to 100°F (7°C to 38°C); avoid freezing.
